Summery of what I did this week

I login to pluralsight and went to the cloud playground. I set up a virtual machine. I choose to set up a window 2025 virtual machine with a tag(class). I give the virtual machine 2 core and 8 gb of ram due to the fact that we might be doing a lot on it.

I fill out the form on with the information about this server and what I have done and a screen shot of the server on pluralsight.
